LIVE INTRODUCTION + EDITED RESPONSES

Introduce live. Roll the answers.

Your job: edit a clear 30-45 second response package. The reporters can introduce it live, then the crew plays your finished video.

TODAY'S EXAMPLE

What is your favorite candy?

BUILD THIS SEQUENCE

LIVE INTRO	ROLL VIDEO	ANSWER 1	ANSWER 2	CLOSE
Aa				END
Introduce the topic.	Title on first clip.	Twizzlers.	Chocolate.	Back to the studio.

More answers? Put them together before the closing.

1 INTRODUCE the topic live

Example: "Earlier this week, we asked people about their favorite candy. Let's hear their answers." Computer crew: roll the finished video. Put a readable title on its opening clip.

2 CUT straight from answer to answer

After "I really like Twizzlers," go to the next person's answer. Cut repeated questions, "okay," long pauses, and the camera moving between people.

3 KEEP each answer honest

Keep enough words to understand the answer. Never cut words to change someone's meaning. A short answer can be enough after the audience hears the question.

4 END on purpose

Choose the clearest answers that fit the time, then return to the studio. For a video shown without a live introduction, keep one question at the start so it makes sense on its own.

CREW CHECK: Can someone who was not filming follow the story? You edit it. The teacher reviews the finished version before it airs.

THE IPAD MOVES

Make the edit in Magic Movie.

Already have a project? Open it and start at step 2. Keep the original footage and your editable iMovie project.

1

Create only if you need a new project

In iMovie: Start New Project > Magic Movie. Choose your clips in story order, then Create Magic Movie. If you do not see Start New Project, return to Projects.

2

Open a clip and trim the repeated question

Tap a clip, then its right arrow. Tap the clip to show yellow edge handles. Drag the LEFT edge past the repeated question. Drag the RIGHT edge back before the waiting or camera movement. Play it to check the whole answer is still there.

3

Split one long recording into answers

Open the clip with its right arrow. Tap Edit, then drag the clip under the playhead to the cut point. Tap Split. Trim the pieces so you keep complete answers. Use Undo if you cut too much.

4

Put the answers together

Tap Back to the clip list. Hold a clip until it lifts, then drag it to its new position. Drop BETWEEN clips. Dropping onto a clip creates a group; tap that group's thumbnail to see what is inside.

5

Add the title people will actually see

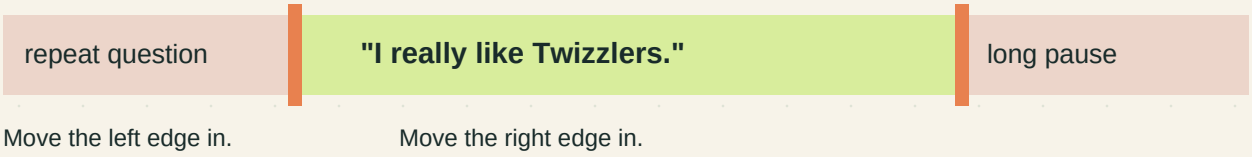

Open the first clip with its right arrow. Tap the clip > Titles, choose a layout, then Done. Tap Text, enter your story title, then Done. Naming the project alone does not put a title in the video.

6

Make voices easy to hear

Open a clip > tap the clip > Volume. Raise the voice with Audio. If a Soundtrack slider appears, lower it so music does not cover the words. Listen to every answer, not just the first.

TRIM FROM THE EDGES / KEEP THE COMPLETE ANSWER

STUCK? Show the exact clip and say what you tried.

THE FINISH LINE

Ready for review, not just export.

Work as a crew: one person operates the iPad, one follows the handout, and one listens and checks. Swap jobs between passes.

A SHORT EDITING SPRINT

3 MIN / ORDER

Choose the title, one question, best answers and closing.

8 MIN / TRIM

Cut repeat questions, waits and camera movement.

4 MIN / CHECK

Add title. Listen to words. Watch the whole edit.

BEFORE YOU HAND IT IN

- [ ] The title is visible and spelled correctly.
- [ ] The audience hears the question once, then the answers.
- [ ] No answer loses its first or last important word.
- [ ] Every voice is clear; music stays in the background.
- [ ] The whole story is about 30-45 seconds unless the teacher says otherwise.
- [ ] A partner watched from beginning to end and understood it.

EXPORT > SCHOOL ONEDRIVE > TEACHER

Follow the existing ECTV export and sharing steps. Keep the project. Tell the teacher it is ready and wait for their review. A finished video is not a promise that it will air.

Need the tap-by-tap export steps? Use the ECTV iMovie page linked below.

QUICK FIXES / TEACHER REFERENCE

When the automatic edit is wrong.

Try the matching fix. Show the teacher the specific problem if it still does not work; do not start the whole project again.

1

It cut off the answer

Open the clip and pull the yellow edge outward to restore more footage. If the edge will not move, there are no more recorded frames at that end.

2

I cannot find my clip

Return to the clip list. If you accidentally made a group, tap the group thumbnail to expand it. Avoid deleting the project to fix one clip.

3

The title is missing

A project name is not an on-screen title. Open the opening clip, add a Titles layout, and then enter the words with Text.

4

The music is louder than the speaker

Open that clip and use Volume. Audio controls the recorded voice; Soundtrack controls the music for that clip. Lower music and replay.

5

We only have a few minutes

Finish the story order and clear answers first. Skip extra effects. Use one title, one question, a few complete answers, and a closing.

CHECKED AGAINST APPLE'S iMOVIE FOR iPAD GUIDE

Create a Magic Movie

Trim and split clips

Arrange clips and groups

Titles, text and volume

Buttons may vary with iMovie version. Illustrations show story structure, not app screenshots.
